Women And Economics: A New Zealand Feminist Perspective

Prue Hyman

In 1988, Marilyn Waring published *If Women Counted: A New Feminist Economics*, a groundbreaking and systematic critique of the system of national accounts, the international standard of measuring economic growth, and the ways in which women's unpaid work as well as the value of Nature have been excluded from what counts as productive in the economy. Feminist economics shares many of its perspectives with ecological economics and the more applied field of green economy, including the focus on sustainability, nature, justice and care values. Critiques of traditional economics.
